

```
std::integral_constant  
< size_t, sizeof...(Ts)>
```

The diagram illustrates the inheritance of the `sizeof...(Ts)` value. A light gray box at the top contains the definition of `std::integral_constant`. A darker gray box at the bottom contains the definition of `std::tuple_size`. A blue arrow points from the `std::tuple_size` box up to the `std::integral_constant` box, indicating that `std::tuple_size` inherits from `std::integral_constant`.

```
std::tuple_size< testing  
::internal::FlatTuple<  
    Ts... > >
```
